

Design and Plan Workplace Productivity

Design and Plan is key to ensuring a sustainable digital transformation in support of workplace productivity, that not only meets your needs today but evolves with your business.

At SCC, our Solution Designers work collaboratively with your business to agree on a transformation strategy and vision; that is ideally derived from the findings during the Discovery phase.

The output from this service ensures that SCC provides you with the right high-and-low level designs and transformation plans in support of your Workplace Productivity journey; including milestones, quality criteria and key deliverables.

A sustainable transformation must include comprehensive designs to identify additional technology investments, technology adoption, risk, governance, realistic milestones and clearly defined achievable phases; all of which are included in a detailed transformation pack.

Design and Plan

These services look to provide you with three distinct areas of Design and Planning. These areas include:

- High Level Design (HLD),
- Transformation Plan (PLAN)
- Low Level Design (LLD)

If the designs are adopted, they can provide you with a complete end-to-end solution to meet your digital transformation strategy and priorities as determined from the output of EUC consult or your internal strategy process.

Key Benefits

- A complete Workplace Productivity design solution that incorporates all required elements for governance, people, process, and technology.
- A detailed plan for immediate business requirements adopting flexibility for future needs
- Access to in-depth knowledge from within SCC's subject matter experts
- A natural and friction-free route into SCC's annuity based services

Why Partner with SCC?

SCC's approach is to work collaboratively with you, so you are actively involved through the process. This ensures that the design and plan are accurate and tailored to your organisation's needs.

By working with SCC, you have the advantage of tapping into our years of experience in creating technical design documents for customers, ensuring you have an accurate design to implement your requirements.
