

Consulting

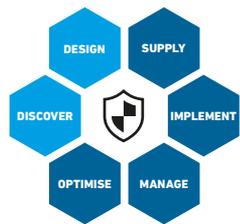

Security

Customers need to be aware of the security gaps across their organisations that include people, processes and technologies. SCC's consulting services are essential for you to address areas where security could be compromised.

We help customers to devise or review their security strategy and maturity.

This involves assessing and providing visibility of risks and vulnerabilities as they impact users and data to improve their security posture.

We also conduct a gap analysis to assist customers to refine a security roadmap and provide a platform for security awareness training.

Security Assessment

We assist you to develop a pragmatic, risk-based strategy. This helps you to focus your security on people and processes, along with implementing key technologies across your platforms and infrastructure.

SCC delivers 3 main Assessment services:

1. Cloud Security Assessment

Our expert team assesses your cloud maturity and migration readiness across you SaaS, PaaS and IaaS solutions that may include Amazon Web Services (AWS), Office 365 and Microsoft Azure.

2. Cyber Risk Assessment

We assess your cyber security posture to determine key vulnerabilities, identify risks to key information assets and prioritise those risks in line with your business needs.

3. Compliance

We deliver compliance services to ISO 27001 standards and Cyber Essentials to ensure best practice across your organisation.

Security Architecture

We work with you to develop blueprints, roadmaps and business cases to help plan your transition from current to future security state. These include models that support your strategy and direction as well as ensure the effectiveness of your security processes, governance and policies.

Security Awareness Training

Your people influence your organisation's security far more than technology or policy. For this reason, the SCC consulting practice helps you to build the right security culture within your organisation through the implementation of a security awareness training platform.

Why partner with SCC?

With over 40 years experience delivering IT systems and solutions for customers, we have a practical understanding of the information security landscape and strong cyber security capabilities.

Our international reach and strong global partnerships give us unique leverage in the marketplace, helping us to stay relevant and strengthening our security capabilities.

We continually invest in our services to align with your expectations and effectively minimise the security risks and potential breaches our customers face.

Key Benefits

- We save you the time, effort and money of acquiring tools and technologies that do not necessary address your security pains through early determination of actual needs.
- With our data-centric, process oriented and user-focused approach to security consulting, we can adequately discover and design for your infrastructure, protecting what matters to you.
