

Solutions

Security

Organisations need to develop appropriate safeguards to protect against the impact of a security breach. Our solutions help you secure your users, systems and infrastructure, strengthening your security posture.

Our security solutions provide an integrated security suite that delivers the right technologies to enhance your existing practices.

We deploy solutions to help you secure your cloud, data, networks and systems to mitigate risks that may stem from insider and external attacks.

Identity and Access Management (IAM)

We build solutions that can help you to control, govern and manage user identities and access to services and data across your infrastructure. Our IAM implementation will protect your privileged users in your on-premise and cloud environments while automating access to applications and services. This ensures adherence to policies and standards and maintains efficiency by minimising the risk of any leakage of confidential data and privileged information.

Cloud Security

Your Cloud Security must keep up with your changing cloud landscape. We implement a Cloud Access Security Broker solution to provide you with more control over your IaaS and SaaS platforms. With visibility on user activity, data, behaviours and applications, we offer a solution that will enforce compliance and improve data and threat protection.

Network Security

In today's connected business environment, network security and availability are essential to you.

We implement network security solutions that protect your network and assure your organisation's security across cloud environments and on-premise infrastructure. We help you to prevent unauthorised access, misuse, modification and denial of network access and resources.

Why partner with SCC?

Our depth of capabilities for the solutions we provide assures customers that we can execute with greater agility.

We have extensive experience, qualifications and certifications in a wide range of partner technologies that underpin our solutions.

You benefit from thought leadership, key knowledge and vital experience, shared across our global partner network.

Key Benefits

- Our solutions give you the right level of visibility, compliance and protection
- We evaluate and deliver the right solution to meet your security needs
- We provide cost effective solutions that offer the flexibility of scaling up or down, to accommodate your current and future needs.
