 BACK TO WORK**

WE SUPPORT SCREENING

**CATPHONES.COM**

The Cat S61 or Cat S60 should only be used as one aspect of a wider temperature screening program. Cat phones can identify individuals in a population that show higher than average skin temperature in relation to a calibrated "normal". Cat phones do not find individuals experiencing Covid-19/ Coronavirus symptoms, and therefore they cannot be used to diagnose Covid-19/ Coronavirus, or any other physical condition. We are not advertising these devices for use in the medical industry or for medical purposes. There is no way to thermally detect an infected individual who does not exhibit an elevated skin temperature, and only a qualified and licensed medical practitioner can determine if an individual exhibiting an elevated skin temperature is experiencing any abnormal medical condition. Users should comply with any local laws governing the use of surveillance tools.
