Network Health Check
Networking Assurance

It is important for customers to have a detailed understanding of their network infrastructure before planning and investing further in changes.

SCC delivers our Network Health Checks to provide customers with an assessment of their network in order to provide sufficient insight across the network devices in their infrastructure.

Networks are constantly evolving as business needs change. Whether it is rightsizing, downsizing, expansion or capacity planning, our assessment validates the critical components of the network. As part of our Health Check, we provide an overall view of your network infrastructure, including analysis of its performance and an investigation into its security posture. Only when you can see how every part of your network infrastructure runs and how applications are delivered can you understand how to improve it to ensure that it fits the needs of your business. Understanding how the network infrastructure operates is a key facet of any IT delivery strategy. We are seeing greater reliance on the network today as it joins the rest of IT together. It is a vital transport layer that can really enable the business to perform better.

SCC's Network Health Check delivers reports that prioritise the information that really matters to your organisation and are aligned to your business goals. Our expert team will work closely with you to look at all the elements that a causing issues.

Why partner with SCC?

We have worked with a range of customers delivering network solutions and look at a number of aspects when carrying out a network health check. These include:

- Physical Topology

- Logical Topology

- Hardware Audit

- End of Life Status

- Software Vulnerabilities

- Network Recommendations:
    » Segmentation
    » Industry Best Practice
    » Quality of Service
    » Resilience, Redundancy and Availability
    » Bandwidth
    » Security

From this information we then provide an overall recommendation as to the direction of the network.

Key Features

- A detailed, in-depth report to understand the exact state of your network infrastructure.

- Ability to look at a number of different elements of the network, from equipment used, to topology, configuration.

- Can be tailored to look at specific aspects that you know to be an issue.

Key Benefits

- Provides a detailed set of recommendations on the future direction of the network.

- Allows you to really see where you need to invest to bring the network up to date.

- Help to inform a wider transformation agenda.
