

Welcome to the SCC
IBM Engagement Centre

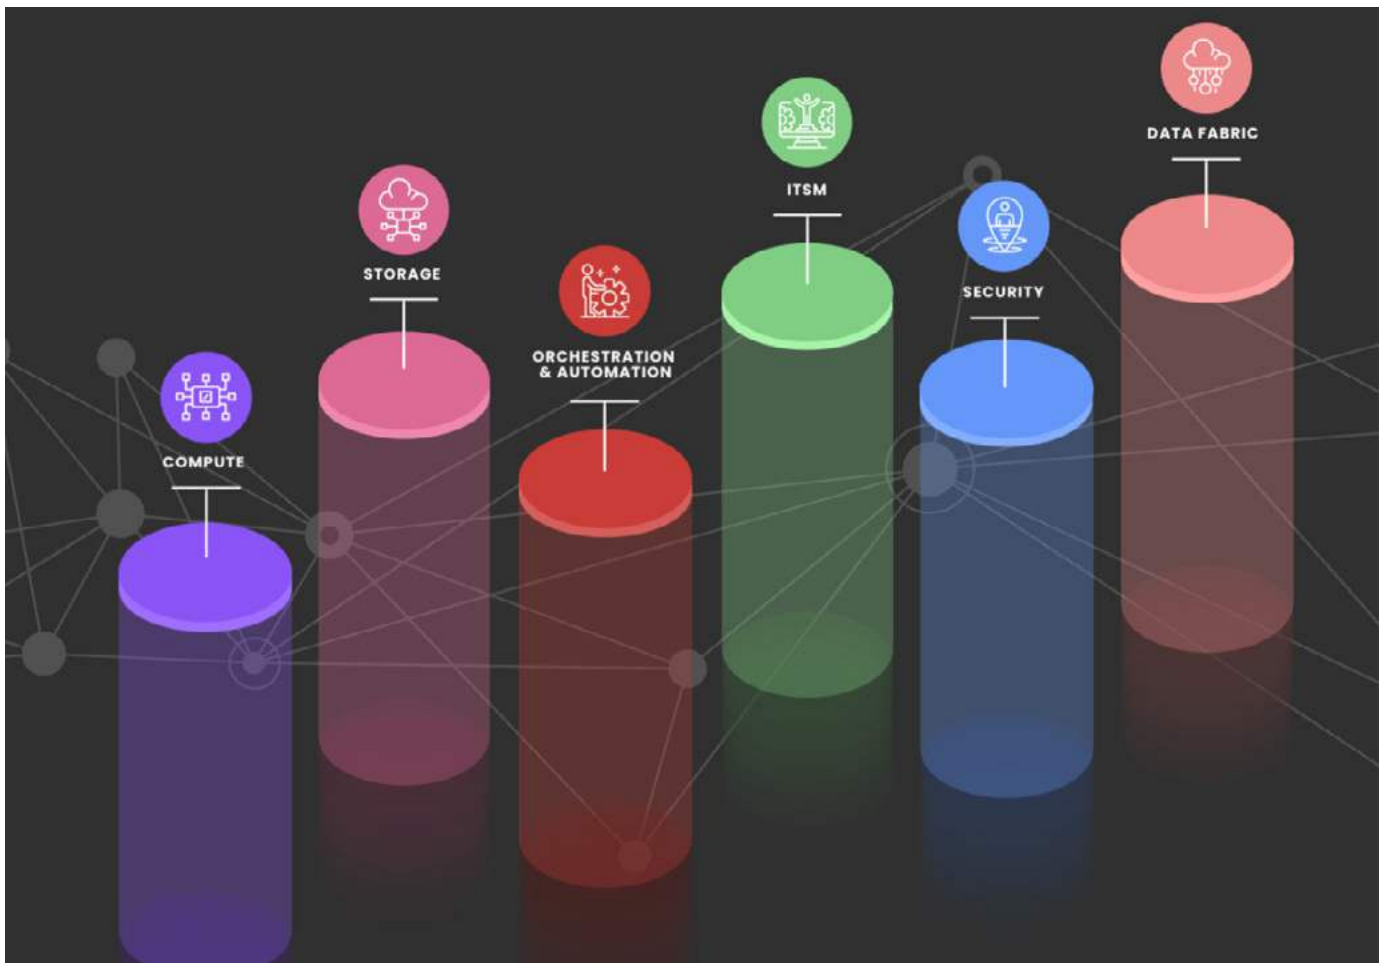

SCC are an enterprise infrastructure and workplace productivity provider, serving over 1000 clients here in the UK, and many more in Europe. We aspire to design, implement, and manage modern and flexible infrastructure solutions delivering the best possible technical and business outcome.

This resource centre is designed to be a “one stop shop” where you can easily navigate through the comprehensive range of innovative solutions that SCC are able to offer built upon IBM technologies.

In each room you will see how we can tailor offerings to take you on a journey through discovery, design, supply, management, and optimisation.

Please use the links provided to access additional materials and of course, to make direct contact with a member of our dedicated IBM team.

The SCC and IBM Security Room

How are we protecting our data? With the help of IBM Security.

Welcome to the Security room in the SCC IBM Engagement Centre. The threat landscape is volatile, dynamic and evolves at a significant pace.

This creates a material challenge for organisations to protect their brand reputation against the risk of cyber incidents. Unfortunately, it is now a case of "when" not "if", such incidents occur.

The importance of Cyber security increases exponentially as organisations adopt digital transformation strategies, presenting cybercriminals with numerous new openings to exploit valuable data.

The IBM Data Fabric Room

AI Doesn't work until it works for everybody. That's why SCC partnered with IBM for trustworthy AI applications.

Welcome to our data fabric room. Data Fabric is a data management architecture that can optimize access to distributed data and intelligently curate and orchestrate it for self-service delivery to data consumers.

Working with SCC and IBM, you can elevate the value of your enterprise data by providing users access to the right data just in time, regardless of where it is stored.

Visit this room to understand how your business users and data scientists can access trusted data faster for their applications, analytics, AI and machine learning models and business process automation, helping to improve decision making and drive digital transformation.
