IBM Flash systems

Shifting from Cyber security to Cyber Resilience

SCC partnering with IBM have the right solutions to help you avoid a cyber attack, IBM's Flash systems offer Enterprise level storage starting from the FS5200 for entry level (still offering Enterprise features) up to the new FS9500,

What are your plans in regards to the impact of an attack? Do you know about IBM's Safeguarded copy and Cyber Vault,

Let us help you understand your environment by offering a Cyber Risk Assessment (free of charge).

Supply - IBM is still in a strong position with regards to availability, much of our hardware is available on normal lead times so this will avoid unnecessary delays to your projects.

IBM Spectrum Virtualize Safeguarded Copy and Cyber Vault – demo available

IBM Spectrum Virtualize has a Safeguarded Copy functionality, allowing an immutable copy of data to be taken to assist in identification and recovery from Cyber-attacks and other data loss.

Cyber Threats are escalating. Can any business afford to not be prepared for an attack? it's not if it will happen, its when,

The Safeguarded Copy function creates and isolates immutable point-in-time copies from production data. Therefore, if a cyber or ransomware attack occurs, you can quickly recover and restore data from those on Array Safeguarded copies.

The Safeguarded Copy function is available with IBM Spectrum Virtualize software R8.4.2, and requires requires IBM Copy Services Manager (CSM) as an external scheduling application. IBM

Copy Services Manager coordinates and automates the taking, cataloging and recovery of Safeguarded Copies.

A demo environment is available to try out and demonstrate Safeguarded copy and Cyber vault - here

Cyber Resilience Assessment

Assess your risk and architect steps to protect your business

Understanding your risk is the first step in developing an effective and tailored cyber resiliency strategy. Based on the NIST Security Framework, the Cyber Resiliency Assessment helps IT and Security teams evaluate the current data protection state of their organisation, identify strengths and vulnerabilities, and design a roadmap of recommendations

to protect your business. The Cyber Resiliency Assessment is a no-cost, two-hour virtual workshop with IBM security experts and storage architects. The analysis and recommendations are confidential, vendor neutral and non-invasive without the need to install anything or run scripts. We will work with your team to:

▪ Review data backup, protection, and restoration procedures

▪ Identify safeguards to prevent becoming a cyberattack victim

▪ Understand critical business outcomes and connect them to targeted cyber resiliency strategies.

In the final report you will come away with:

▪ Detailed assessment report of findings

▪ Roadmap of recommended improvements and considerations

▪ Management presentation, connecting practical methods to achieve your business outcomes.

IBM Spectrum Protect Plus SAAS solution

IBM Spectrum Protect Plus Online Services is a new SaaS solution that, in this release, enables data protection for Microsoft 365 and addresses all major use cases

for backup and recovery of Microsoft's online products. Specifically, the IBM Spectrum Protect Plus Online Services for Microsoft 365 provides:

▪ Unlimited, automated backup for Microsoft Cloud assets.
▪ Granular restore, in or out of place.
▪ Visibility and control over protected content.

Furthermore, IBM has a roadmap for this new offering related to Microsoft, Google Workspace and Salesforce.
