

EPOS Solutions for the Hybrid Workforce

Investing in the future of work

Over the past years, hybrid work has transformed the workplace. Along with the opportunities of increased flexibility and productivity come the challenges of adapting to hybrid work, on both a technological and cultural level.

EPOS helps solve some of the challenges of the new normal, providing the highest quality audio and video solutions to make hybrid workplaces more collaborative and productive.

Today, people need to find focus and clarity, wherever work happens. By giving your workforce the tools they need to do their best, you create a workplace that's built for the future.

Your brain is not built for hybrid meetings. EPOS BrainAdapt™ is.

Meeting fatigue occurs when people's minds become worn out by dropped signals, poor audio quality and distractions in the background.

Based more than a decade of psychoacoustic research, EPOS designs audio and video solutions that provide the best conditions for the brain.

EPOS headsets, speakerphones, and video bars built on EPOS BrainAdapt™ support the brain's natural way of processing sound. This means less fatigue and more focus for you and the people you are communicating with.

Technology designed for your brain

- Increased focus in hybrid meetings
- Better concentration in the office and at home
- Improved productivity throughout the workday

EPOS solutions designed for the hybrid worker to achieve more

Intelligent audio

- Headsets with active noise cancellation and advanced microphones
